Michael Castera, CTR

Champion for Cancer Surveillance

June 9, 2006

SAFER • HEALTHIER • PEOPLE™

Features Overview

- Web-based cancer data collection tool using the NAACCR data standards
- Secure transmission of data through Secure Sockets Layer (SSL) connection
- Currently supports
 - Abstract Entry: online abstracting tool for smaller facilities
 - File Upload: submit bundles of abstracts created by any abstracting tool
- Data validation using NPCR Edits

SAFER • HEALTHIER • PEOPLE™

Abstract Entry Over the Internet

- No local software to install
 - Runs in browser
- No local database to manage
 - Data is saved at the central registry
- Lookup assisted data entry
- Collaborative staging calculation is supported
- Display Types and Edit Sets for facilities are managed at the central registry by a Central Registry Administrator
 - Display Type: An ordered subset of the standard NAACCR and local data items that a central registry is interested in collecting
 - Edit Set: A collection of Edits that you may want to run an abstract through in order to validate it

Abstract Entry (contd.)

- A Central Registry Administrator assigns Display Types and Edit Sets to users of facilities
 - Abstractor enters and edits abstracts using the Display Type and Edit Set assigned to her
- Abstracts run through Edits each time they are saved and edit results are immediately available

SAFER • HEALTHIER • PEOPLE™

File Upload

- Facilities can submit bundles of abstracts in the NAACCR format
- Files run through Edits validation upon submission
 - Capability to run different Edit sets on files from different facilities
 - You can wait till the edit report comes up
 - Or close Web Plus and Web Plus will send you email when the report is ready
 - Report is not emailed; user has to log on to Web Plus to view the report
- Supports automated rule for file acceptance - accept if less than n% of records have errors

SAFER • HEALTHIER • PEOPLE™

File Upload (contd.)

- Option for offline, batch running of edits on large files and under heavy load conditions available

SAFER • HEALTHIER • PEOPLE™

Web Plus

Security

SAFER • HEALTHIER • PEOPLE™

Web Plus - Security

- Security is provided by
 - the security features of the application and
 - by digital certificates, the network infrastructure and the operating environment.

SAFER • HEALTHIER • PEOPLE™

Application Security

- Form-based authentication
 - Log in requires user id and password
- Role-based access to functions
 - Central Registry Administrator
 - Local Administrator
 - Facility Abstractor
 - Central Registry Abstractor
- User actions are logged and are available for audit
- Abstracts entered by a facility are not visible to other facilities

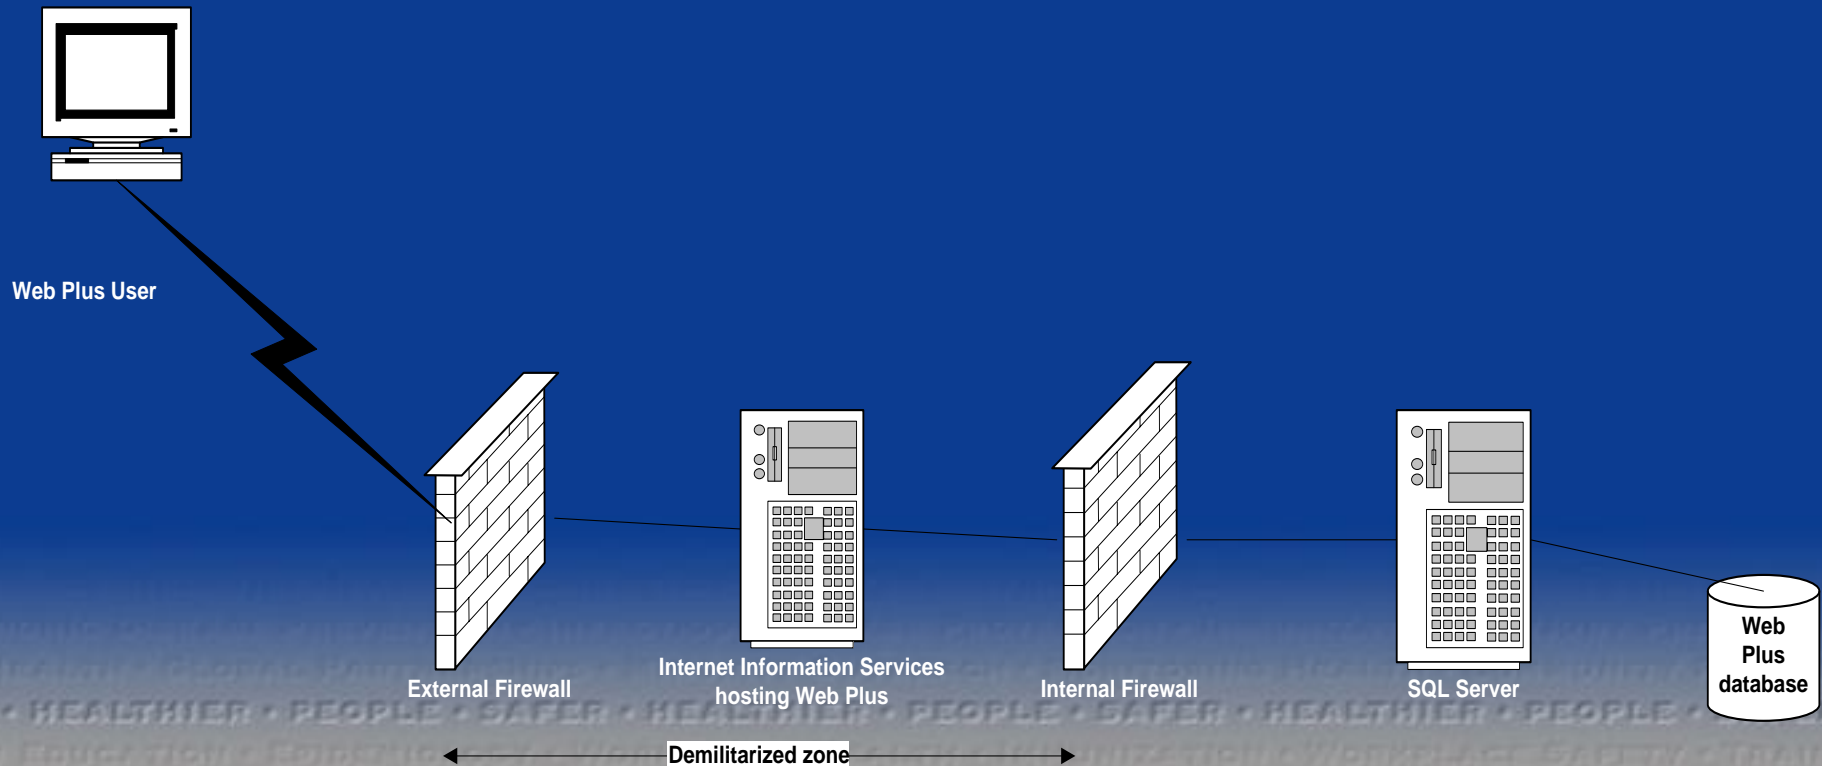

SAFER • HEALTHIER • PEOPLE™

System Security

- System security should be implemented by the central registry following the guidelines provided in the security document
- System security includes -
 - securing network infrastructure
 - configuring the web server for security
 - installing digital certificates on the web server and optionally on the clients for SSL encryption and server validation
 - fault tolerance, backup plans, etc.

System Architecture

- Web Server is in the DMZ
- SQL Server in the internal trusted network

SAFER • HEALTHIER • PEOPLE™

Future Plans

- Add follow back procedure
 - Preload death certificates
 - Preload pathology reports
 - Notify physicians with email
 - Physicians log in to Web Plus and complete the requests
 - Preliminary prototypes available for your comments at the booth
- Add HL7 reader to read lab reports and identify cancer cases

SAFER • HEALTHIER • PEOPLE™

Demo Web Plus Site

- Visit <http://broadband.ngcits.com/WebPlus/login.aspx>
- Log in to the server using "demo" as both the user id and password
- Log in to Web Plus by selecting "St Simon Hospital" as facility, "John Doe" as user and "abstractor" as password.

REGISTRY PLUS ONLINE HELP

NAACCR Standards for Cancer Registries Volume II: Data Standards and Data Dictionary

Source: NAACCR Standards for Cancer Registries Volume II: Data Standards and Data Dictionary, Seventh Edition, 03/2002

RACE 3

Alternate Name	Item #	Length	Source of Standard	Column #
	162	2	SEER/COC	107-108

Description

Code the patient's race. Race is coded separately from item 190 ([Spanish/Hispanic Origin](#)). All tumors for the same patient should have the same race code. If the patient is multiracial, code all races using items 161 (RACE 2) through item 164 (RACE 5).

Rationale

Because race has a significant association with cancer rates and outcomes, a comparison between areas with different racial distributions may require an analysis of race to interpret the findings. The race codes listed correspond closely to race categories used by the U.S. Census Bureau to allow calculation of race-specific incidence rates. The full coding system should be used to allow accurate national comparison and collaboration, even if the state population does not include many of the race categories.

Note: If any race code (Race 2, 3, 4, and 5) is blank, all subsequent race codes must be blank. If more than the Race 1 code is entered, and if any race equals 99, then all race codes (Race 1, 2, 3, 4, and 5) must be 99. If more than the Race 1 code is entered, and if any race codes (for Race 2, 3, 4, and 5) are 88 (no further race documented), then all subsequent race codes also must be 88.

Codes

Edits Processing on Abstracts Bundle

The screenshot shows a Microsoft Internet Explorer window titled "Web Plus - Microsoft Internet Explorer". The address bar displays "http://ngdev.od.cdc.gov/WebPlus/upload.aspx". The page content includes a navigation bar with "New Upload", "Previous Uploads", "Change Password", and "Log out". The main text area states: "File was successfully uploaded and has been submitted for edits processing. Depending on the current load on the server it may take a while to complete the edits report. You can either wait for the report to come up or exit Web Plus at this point. You will be notified by an email when the report becomes available." Below this, it says "Please wait if you want to view the report now." followed by "150 abstracts to process ..." and "Now processing ...". At the bottom of the processing section, there is a red progress indicator: "... 1 .. 2 .. 3 .. 4 .. 5 .. 6 .. 7 .. 8 .. 9 .. 10 .. 11 .. 12". The taskbar at the bottom shows the Start button, several application icons, and the system clock displaying "10:22 AM".

STATEREG: [Select Fields](#) > [Select Editset](#) > [Select Individual Edit Options](#) > [Select CS Calculation Preference](#)

Step 4: Select Collaborative Staging Preference

Collaborative Stage processing can calculate stage according to three separate systems: SEER Summary Stage 77, SEER Summary Stage 2000, and AJCC Stage Group. If you do not collect the input values for all three calculations, you can avoid unwanted error messages by un-checking the boxes for the derived fields that you do not need to calculate.

☐ Compute SEER1977 ☐ Compute SEER2000 ☐ Compute AJCC
